*These statistics are based on the year of birth. Registrations for litters born in 2010 and, to a lesser degree, in previous years will continue to be received. Therefore, totals included in this report are not final and future reports may reflect increases. Because current litter applications no longer require information regarding the sex of any kittens, statistics regarding the total number of males and females born each year, as well as the average number of males and females per litter, will no longer be reported.

The Cat Fanciers' Association, Inc.

Registration Number Tables

For the year ending December 31, 2010

On the following pages are the tables of breed/color designation codes. These codes incorporate the breed, color and sex of a cat and are used as the prefix section of a cat's registration number.

The second portion of the registration number contains no encoded information but provides a unique filing key to the records for a cat.

Col. 1 The registration number prefix. Encodes the breed, color and sex. In the table presented below, which contains actual data, the prefix 9908 identifies a black male American Wirehair. The value of one is added to this code to identify a female of the same breed and color, thus, the prefix code 9909 would be used for a black female American Wirehair.

Col. 4. Indicates the number of cats registered within the color for the period 1/1/10 through 12/31/10.

Col. 5. Indicates the number of cats registered within the color for the period 1/1/58 through 12/31/10.

Tabbies other than classic are identified by the addition of the letter M (mackerel) or S (spotted) to the breed portion of the registration number.

An asterisk (*) after the breed/color code denotes that it is no longer in use. cc = colorpoint carrier.
